	Why and How to Read this Book	17
	Foreword by Jean-Louis Vincent	19
	Foreword by Luciano Gattinoni	21
	Preface to the 3rd edition	25
	Preface to the 1st Edition	27
I	[How to Understand Acid-Base]	29
1	Body Fluids	31
1.1	Introduction	31
1.2	Intracellular solutions	32
1.3	Interstitial solutions (Tissue Fluids)	32
1.4	Blood plasma	33
1.5	Other body fluids	34
1.6	Summary	34
2	Goals, Definitions and Basic Principles	35
2.1	Rationale and goals	35
2.2	Definitions: neutral, acidic, alkaline, acid, base	36
2.3	Definitions: ions, nonelectrolytes, strong and weak electrolytes	38
2.4	General principle: electrical neutrality	41
2.5	General principle: conservation of mass	42
2.6	Osmotic coefficients, activities and concentrations	42
2.7	Summary	43

3	The Simplest Acid-Base System: Pure Water	45
3.1	Introduction	45
3.2	The meaning of $[H^+]$ and $[OH^-]$	46
3.3	pH	47
3.4	Water dissociation equilibrium: the water ion product, K_w	49
3.5	Acid-base analysis of pure water	50
3.6	Updated definitions: neutral, acidic and basic Solutions	51
3.7	Summary	53
4	Strong Ions and the Strong Ion Difference	55
4.1	Introduction	55
4.2	Analysis of strong ions in water	55
4.3	The strong ion difference (SID)	57
4.4	Small [SID] values: neutral salt solutions	58
4.5	[SID] negative and larger than 10^{-6} Eq/Liter	61
4.6	[SID] positive and larger than 10^{-6} Eq/Liter	62
4.7	pH curves, titration and neutralization	64
4.8	Interstitial fluid	66
4.9	Gamblegrams	67
4.10	Stomach acid	68
4.11	Summary	69
5	Weak Electrolytes and Buffers	71
5.1	Introduction	71
5.2	Weak acid solutions: the equations	72
5.3	Acid-base behavior of weak acid solutions	73
5.4	Blood plasma without CO_2	78
5.5	Buffers, buffering and buffer strengths	79
5.6	Weak base solutions	86
5.7	Mixtures of weak acids and weak bases	89
5.8	Gamblegrams	92
5.9	Salts	93
5.10	Indicators	95
5.11	Indirect $[H^+]$ measurement with weak acid or base	96
5.12	Titration of weak electrolyte solutions	97
5.13	Add-on weak acids and weak bases and their salts	98
5.14	Other variables	99
5.15	Summary	100

6	Strong Ions plus Carbon Dioxide	111
6.1	Introduction	111
6.2	Partial pressure in solutions	112
6.3	Carbon dioxide reactions in water	114
6.4	Quantitative behavior of strong ions plus CO_2	116
6.5	Titration of isolated standard interstitial fluid	125
6.6	Buffering and buffer strengths	125
6.7	The $[\text{H}^+]$ - PCO_2 graph	129
6.8	Summary	130
6.9	Appendix	132
7	Strong Ions plus Carbon Dioxide plus Weak Acid	135
7.1	Introduction	135
7.2	Quantitative analysis of isolated blood plasma: strong ions plus weak acid plus CO_2	136
7.3	Buffering and buffer strengths in isolated plasma	144
7.4	The $[\text{H}^+]$ - PCO_2 graph for isolated plasma	148
7.5	Intracellular fluid of red blood cells	148
7.6	The $[\text{H}^+]$ - PCO_2 diagram for RBC-ICF (figure 7.15)	157
7.7	Other intracellular fluids: standard ICF	158
7.8	Generalized buffer strengths	162
7.9	Summary	166
8	Interactions between Body Fluids	169
8.1	Introduction	169
8.2	Acid-Base interactions between ISF and plasma: capillaries	174
8.3	Cell membranes: ISF-ICF interactions	176
8.4	Whole blood: the plasma-RBC-ICF interaction	178
8.5	Kidney tubules: plasma-urine interactions	179
8.6	Summary and conclusions	180
8.7	References	181
9	Whole-body Acid-Base Balance	183
9.1	Introduction	183
9.2	The lungs	184
9.3	The kidneys	185
9.4	The gastrointestinal (GI) tract	191
9.5	Clinical implications	194
9.6	Buffers and bicarbonate: what are their roles?	197
9.7	Summary	199

II	[Quantitative Acid-Base Chemistry and Physiology]	201
10	Normal [SID]	203
10.1	Introduction	203
10.2	Normal [SID] – measurement issues	203
10.3	Normal [SID] – conceptualization issues	206
10.4	Summary	214
11	Role of Non-Volatile Weak Acids (Albumin, Globulins and Phosphate)	221
11.1	The Stewart model	221
11.2	Quantitative physicochemical models of plasma featuring detailed analyses of albumin	223
11.3	Charge contributed by albumin and molar buffer capacity of albumin over the pH interval of 6.9 to 7.9	227
11.4	Plasma globulins	227
11.5	Charge contributed by the phosphoric acid – phosphate system	229
11.6	Base excess and derivation of the van Slyke equation for plasma	230
11.7	Acid-Base disturbances are caused by alterations in independent variables	232
11.8	Albumin acts as a “pH setter” but not as a true buffer	233
11.9	Relationships between anion gap, albumin, inorganic phosphorus, and lactate	233
11.10	Calculation of K_A and $[A_{TOT}]$	235
11.11	Summary	235
12	Advances in Estimating $[A_{TOT}]$ and K_A	239
12.1	Buffer ions and non-buffer ions (strong ions)	239
12.2	Apparent weak acid dissociation constant (K_A) for buffers	239
12.3	Total plasma concentration of non-volatile weak acids (A_{TOT})	241
12.4	Methods for estimating A_{TOT}	242
12.5	Methods for estimating K_A	245
12.6	Experimental determination of A_{TOT} and K_A using CO_2 tonometry	247
12.7	Concerns regarding experimentally determined values for A_{TOT} and K_A	250
12.8	Conclusions	251
13	Base Excess	257
13.1	Historical background	257
13.2	Base excess and the buffer curve	258
13.3	Alignment nomograms	259
13.4	Van Slyke equation	259
13.5	Criticisms of Base Excess	261

13.6	Base excess for the Stewart practitioner	262
13.7	Conclusions	264
14	Intracellular Acid-Base Regulation	267
14.1	Introduction	267
14.2	Importance of pH in the cell	267
14.3	Regulation of pH inside cells	269
14.4	Strong ions transporters	272
14.5	Red blood cells	276
14.6	Measurement of pH inside cells	276
14.7	Cellular Acid-base Modeling	277
14.8	Conclusions	278
15	Renal Regulation of Acid-Base	283
15.1	Introduction	283
15.2	Overall regulation of acid-base homeostasis	284
15.3	Model development	284
15.4	Analysis based on amount and type of acid	289
15.5	Understanding urine exchanges requires additional calculations	289
15.6	Molecular biology of renal acid excretion	290
15.7	Role of ammonium	291
15.8	Other models for acid-base physiology	292
15.9	The physiological model	293
15.10	The physicochemical model of Stewart	293
15.11	Clinical correlates	295
15.12	Renal Tubular acidosis	296
15.13	Distal RTA (type 1)	296
15.14	Proximal RTA (type 2)	296
15.15	Mixed RTA (type 3)	297
15.16	Hyperkalemic RTA (type 4)	297
15.17	RTA lookalikes	297
15.18	Conclusions	297
16	The Liver and the Gut	305
16.1	Introduction	305
16.2	Normal physiology: the GI tract	305
16.3	Diet	306
16.4	Liver-kidney interaction	307
16.5	The liver and SIG	308
16.6	The liver and $[A_{TOT}]$	308
16.7	Pathophysiological mechanisms	311

16.8	Acid-base effects on gut function	311
16.9	Conclusions	312
17	Acid-Base Regulation of Cerebrospinal Fluid	315
17.1	Introduction	315
17.2	Cerebrospinal fluid production	316
17.3	Blood-CSF barrier	316
17.4	Acid-Base Physiology of Cerebrospinal Fluid	318
17.5	Central and peripheral chemoreceptors and regulation of breathing	321
17.6	Clinical scenario	321
17.7	Clinical Considerations	323
17.8	Conclusion	324
18	Pregnancy	329
18.1	Introduction	329
18.2	Hyperventilation	329
18.3	Volume expansion	330
18.4	Changes in independent variables during pregnancy	331
18.5	Changes in dependent variables during pregnancy	332
18.6	Compensatory responses to acid-base disturbances in pregnancy	335
18.7	Pregnancy, exercise and acid-base	338
18.8	Altitude, pregnancy and acid-base	339
18.9	Conclusion	339
19	Comparative Animal Physiology and Adaptation	345
19.1	Introduction	345
19.2	Activity in biological systems	346
19.3	Effect of temperature on K_A	346
19.4	Effect of ionic strength on K'_A	347
19.5	Why is blood pH regulated?	348
19.6	Application of acid-base approached in comparative physiology	349
19.7	Summary	358
19.8	References	359
III	[Clinical Applications of Quantitative Acid-Base Medicine]	363
20	Unmeasured Ions and the Strong Ion Gap	365
20.1	Introduction	365
20.2	Anion gap	366
20.3	Anion gap modifications	367

20.4	The Base Excess gap (BE gap)	368
20.5	Strong ion gap	370
20.6	Is [SIG] better at detecting unmeasured ions than its predecessors?	372
20.7	Net unmeasured ions (NUI) and the 'strong ion calculator'	372
20.8	The importance of chloride	373
20.9	The prognostic power of scanning tools	375
20.10	Conclusion	375
20.11	Summary	375
20.12	References	376

21 Lactic Acidosis 381

21.1	Introduction	381
21.2	Pathophysiology of lactate metabolism	381
21.3	Acid-base aspects of hyperlactatemia	384
21.4	Classification of lactic acidosis	385
21.5	Diagnostic considerations	390
21.6	Therapy	391
21.7	Prognosis	392
21.8	Summary	393

22 Acute Renal Failure, Diuretics, and Renal Replacement Therapy 401

22.1	Introduction	401
22.2	Acid base status and the patient with acute kidney injury	402
22.3	Acid base status and diuretics	404
22.4	Acid base status and Renal Replacement Therapy (RRT)	406
22.5	Conclusions	410

23 Metabolic Alkalosis 419

23.1	Introduction	419
23.2	Mechanisms	419
23.3	Clinical features	421
23.4	Management of metabolic alkalosis	423
23.5	Conclusions	425

24 Acute or Chronic Hypercapnia and Acid-Base Equilibrium 427

24.1	Introduction	427
24.2	CO ₂ physicochemical equilibria	427
24.3	Hypercapnic Respiratory Failure	438
24.4	Correction of acid base disorders in chronic carbonic acid retention	444
24.5	Extracorporeal CO ₂ removal	446

25	Intravenous Fluids	449
25.1	Introduction	449
25.2	Understanding fluid-induced metabolic acidosis	449
25.3	How to balance crystalloids?	453
25.4	Clinical aspects	459
26	Sepsis	473
26.1	Introduction	473
26.2	Respiratory alkalosis	474
26.3	Respiratory and metabolic acidosis	474
26.4	Management of metabolic acidosis	475
26.5	Hyperchloridemic metabolic acidosis	477
26.6	Acid base disorders in critically ill humans	478
26.7	Organ injury and immune modulation	479
26.8	Conclusions	480
26.9	References	481
27	Peri-Operative and Resuscitation Medicine	487
27.1	Introduction	487
27.2	The effect of $[H^+]$ on the patient undergoing anesthesia	487
27.3	The effect of anesthetics on $[H^+]$	488
27.4	The effect of $[H^+]$ on anesthetics	489
27.5	Fluid and ventilator management	490
27.6	The clinician is in control	493
27.7	Emergencies and trauma	493
27.8	Cardiopulmonary Bypass	494
27.9	Temperature	495
27.10	Summary	499
28	Using the Stewart Model at the Bedside	503
28.1	Introduction	503
28.2	The physical-chemical approach at bedside	506
28.3	Base excess partitioning (Fencl–Stewart approach)	508
28.4	Simplified SIG and bicarbonate gap	511
28.5	Practical algorithm for bedside use – “Stewart light”	513
28.6	Conclusion	517
29	Example Cases	523
29.1	Introduction	523
29.2	Practice cases	524

29.3	Limitations to be aware of at bedside	531
29.4	Conclusions	532

In Memory of Luciano Gattinoni	535
